Projects

NutriScan-Food Products Classifier | *Python, scikit-learn, MongoDB, Flutter* | GitHub  **Oct 2024**

- Developed machine learning models to classify products into five nutritional levels (A-E) based on their ingredients.
- Implemented and trained both Random Forest and Logistic Regression algorithms for the classification task.
- Utilized a custom-built dataset of 750 products to train and validate the models.
- Evaluated model performance by comparing metrics like accuracy, precision, recall, and F1 score.
- Generated visual graphs to represent and analyze the predictive accuracy of each model.

Dr.Doc | *Python, CSS, Java, HTML* | GitHub  **July 2025**

- Developed a web application that transforms PDF documents into educational resources using AI.
- Integrated Gemini AI to automatically identify and highlight important content within uploaded PDFs.
- Generated various exam-style questions, including multiple-choice, short-answer, and long-answer, from the text.
- Engineered the app with a Python/Flask backend, PyMuPDF for PDF processing, and an HTML/JS frontend.
- Implemented custom, sentence-level highlighting with user-defined color schemes for a personalized experience.
